

SC-25/50 CONVERSION TERMINAL

The SC-25/50 is a patented system conversion terminal assembly that provides a method for converting all existing systems to the two-wire technology. This simple conversion terminal allows for the renovation and conversion of virtually any irrigation system currently installed. By converting to two-wire technology the operator can take full advantage of the growing sensor and control applications. Additional valves can be installed on any existing system without having to rewire. Flow, moisture or temperature sensors can be installed on existing wiring without running a special two-wire circuit back to the controller.

SC-25 Conversion Terminal

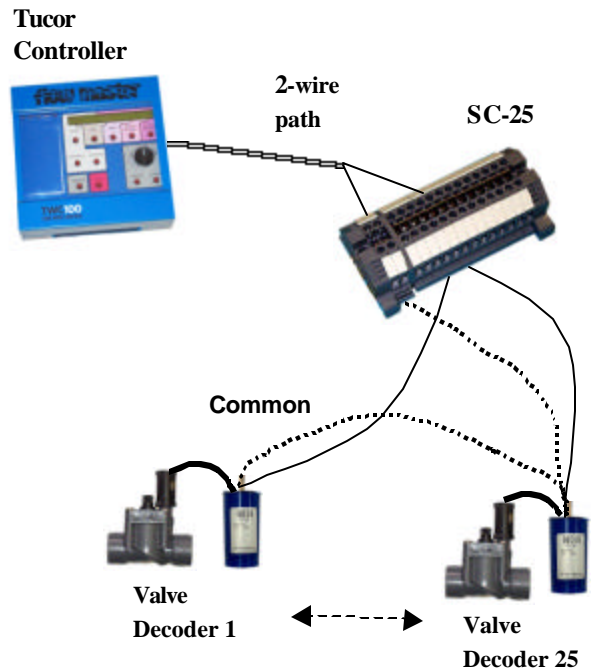

SC-50 Conversion Terminal

US patent #5839658

SPECIFICATIONS:

- SC-25 converts up to 25 valves
- SC-50 converts up to 50 valves

APPLICATION EXAMPLE:

ORDERING CONFIGURATIONS:

- SC-25 25 valve System Conversion Terminal
- SC-50 50 valve System Conversion Terminal
